

## Michio Kaku – Why 10% of UFO sightings remain unexplained

Michio Kaku: Why 10% of UFO sightings remain unexplained.

The subtitles

-what computers need is data. Data by which we can draw conclusions. And when we talk about intelligence in outer space, we, have to, be open to the idea that their intelligence may be quite different, quite different from our intelligence. And therefore, the question is how do we tell? How do we tell where real intelligence is, given the fact that there could be more than one type of intelligence?

-Are we alone in the universe? for the Science Channel, they once put me in a swimming pool with dolphins. Sensors picked up the squeals and chirps from the dolphins as I was swimming next to the dolphins, and then they ran it through a computer. The computer looked for regularities in the chirps and squeals of dolphins, realizing that they speak a totally different language than humans. And their criteria for intelligence would be different from our criteria of intelligence. So, for example, the letter E is the most common letter in the English alphabet. And you can rank the frequency with which certain letters are used to pinpoint who wrote the article. For example, who wrote Shakespeare? Many people have claimed that other writers wrote Shakespearean plays, not Shakespeare himself. But you can run the set of information of Shakespeare's plays through a computer. And sure enough, the signature can be shown to be that of Shakespeare. The frequency of the letter E, the frequency of the letter I, and so on and so forth, allows you to pinpoint who wrote that article, so when you run the videotapes and the audio tapes of the dolphins through a computer, you find, bingo, yes, they are intelligent. Yes, there's a pattern, a regularity to their chirps and so on and so forth. And then you go down the evolutionary scale. You go down to dogs, cats, rabbits, mice, insects. By the time you reach insects, it's pretty much nonsense. They have a communication system, but very little intelligence other than to alert themselves, for food, danger, and stuff like that. And so, it is possible to rank intelligence using computers that look for an algorithm that allows you to see where intelligence lies. We will do that in outer space now. We physicists have often wondered, are there signs of intelligent life in the galaxy? And if so, how advanced might they be?

-we can categorize these alien civilizations at the basis of energy, energy consumption

-Type one would be planetary: they control the weather, they control earthquakes, volcanoes, anything planetary they control because they have the energy, the energy of a planet.

-Type two civilization: has exhausted the power of their planet and they use the Sun, they basically take the energy from their Sun to power their machines. Sort of like the federation of planets in "Star trek", "Star trek" would be a type two civilization.

-Then, this type three, galactic civilization: they roam the galactic space lanes, they play with black holes, sort of like the Empire of "Empire Strikes Back" That would be a type three civilization

- And then the question is, what are we? We are type zero. (not by me: but not we, they the illegal, nazi criminally insane, harmful parasitic echelon machines basements are type zero civilization). We get our energy from dead plants, oil, and coal. we do not even rate on the scale. We have not attained planetary energy at all, that would be type one civilization, we are stuck at type zero.

But what would it take to move between universes? What would it take to enter a black hole? What would it take to break the light barrier? you would have to reach the Energy of type three. And the Energy of type three is called the plank energy. The plank energy is the Energy of the big bang, it's the Energy of a black hole, it's the Energy, the greatest Energy in the universe, and that is the Plank energy. How long before we can attain, the Plank Energy and move between universes? Well, a modest calculation shows that you would have to be about maybe 100.000 years more advanced than us in order to go between universes to harness the plank Energy to leave our universe. So, chances are that if one day we met an intelligent civilization, they would be maybe 100.000 years more advanced than us.

-Then the next question is, how would we know of a type three or type two civilization, if we were to bump into one? we have looked for type two, because type two civilizations give off an Energy, a characteristic black body radiation that we can measure. So far we find no one, now that doesn't mean that there aren't these civilizations out there, it just means that our devices are so primitive that we have not yet been able to conclusively show that they exist. But if they can break the light barrier, if they can go faster than the speed of light, then it's possible they may have the Energy of a wormhole. And at that point, they would be type three. They would have the Energy, the Plank Energy, to create universes or to move between universes.

Historically, when physicists were asked about flying saucers and UAPs and Extraterrestrial civilizations, the bottom line is data. You have to, have data. You just can't say that "Gee, I saw something going across the sky last night" Maybe you did, maybe you did not. But now **we** finally have data, the u.s. navy has admitted that yes, there are hours of videotapes, videotapes that can be analyzed to calculate the characteristics of these things. We now realize that these objects, whatever they are,

can travel up to Mach 20, 20 times the speed of sound, and they can accelerate from Mach 5 to Mach 20 very, very rapidly. And they can even fly underwater, believe it or not, underwater, in the air, into outer space, and they zigzag, when you calculate the centrifugal force inside the rocket ship, you realize that any living thing would be crushed, crushed by the zigzagging of these objects, whatever they are. We are talking about a new law of engineering beyond anything that we can muster here on the planet Earth, the ability to fly up to Mach 20, the ability to fly underwater, the ability to zigzag. These things require technology beyond anything we have. So, we now have the data. Is it an optical illusion or is it extraterrestrial? We do not know until we analyze the data. And now we have Physicists looking frame by frame and perhaps coming up with a conclusion as to where these objects come from. well, about 90% of these sightings can be explained using natural phenomenon or weather balloons or weather anomalies or meteorites. Most of them can be explained. 10% of them seem to defy the known laws of Engineering. So, we have to look at them very carefully, and some of them have multiple sightings by multiple modes.

Back in the 1980s, there was a JAL flight going across Alaska, and all of a sudden, they found two objects flying next to it. These two objects were then tracked by radar, tracked visually. So, there was multiple sighting using multiple modes. And then a third flying saucer came up next to it. So, there were three objects now flying next to this JAL flight. well, afterwards, when the flight landed, the pilots made the announcement that they saw flying saucer.

But then, what happened? Very important. At that point, the pilots were given desk jobs, basically demoted, and that sent a chill throughout the industry, because if you say that you saw something unusual in your airplane, you would be given a desk job and you would not fly again. So, in other words, keep your mouth shut. As a consequence, no data, very little data has been collected until recently. And that's what we physicists need, data, so that we can make objective statements about what these things are. Now, the burden of proof has shifted. The burden of proof is on the military now to prove that these things aren't extraterrestrial, and that's a sea change. Now we realize that we are sitting on hours of videotapes and we are sitting on a mountain of data. The data has to be analyzed frame by frame to figure out what these objects are, what their flight characteristics are, and who is behind them. So, things have changed now. Now we have access to videotapes, and now the burden of proof is to prove that these things aren't extraterrestrial. What happened was citizens' pressure put pressure on certain politicians. These politicians in turn put pressure on the military to declassify some of this information. So that's how it happened. That is the FOIA Act, the Freedom of information Act, that allows citizens to gain access to some classified information. But it's a long torturous process. But some of it is now reaching the press, that yes, the military is owning up to the fact that it's sitting on a gold mine of data that has to be analyzed frame by frame.

My comments and my report about Michio Kaku's are mentioned in this video.

And who this one Report of my own Reports consists as and the others my own Reports, proposal by me (Dimitris Mantzanas) and by my own genus-my own tribe, to UN organization for consideration and from the General Assembly of UN.

#### The Report

He (Michio Kaku) starts his narration on this video mentioning **what** base (the data) a computer program needs, in order to make an analysis, (the data, and as more of data, so more reliable and the analysis).

He (Michio Kaku) refers that we have to be open to the idea that their intelligence (of the extraterrestrial forms of life) may be quite different, quite different from our intelligence (or course we must open to the idea that extraterrestrial life forms may be (if they are not already be) quite different and in their intelligence manners and levels, but sure will be biological creatures with brain, and sure they come from, from gene chains (extraterrestrial gene chains) who of course created and evolved in the our universe, under the laws who governing all the universe, and all the universes who all (as many and to exist) were (and are) created by the same almighty power (and the existence himself) the God.

And continues saying: That the question is how do we tell? How do we tell where real intelligence is, given the fact that there could be more than one type of intelligence? [The intelligence presupposes the biological or course creatures (as the Earthy's), as and for the extraterrestrials to have an advanced brain and as more data this brain can to perceive, to receive, and to analyze (analytic thinking) and his capability to wide understanding and with productivity to interface with polysynthetic factors (different environments and environmental entities, different cultures, religions, different species of Mother Nature creatures), so advanced and his ability to predict futured events and to is prepared to deal with them, and so advanced and his intelligence and his capability to deep and understand and to communicate with more than one type of intelligence (of Earthy creatures, but and with extraterrestrial intelligences).

And in continuation he is setting the question:

– Are we alone in the universe? And **he** makes a reference to dolphins [who dolphins is contained in the creatures with high level of intelligence with brain almost similar in advanced with the human brain, but with different intelligence. (the environment in which they live and their living conditions and needs are different from the humane, so they have develop a different intelligence, they forced by the environmental condition, from many years ago migrated from the land to sea, with great adaptability to their new environment], and that if we run the habits and behaviors (the data) of the dolphins through a computer, the computer will looked for regularities in their habits and behaviors and realizing that they speak a language, but a totally different language than humans (He refers how a computer program can analyze the habits, the behaviors, and the society of the dolphins and to realize that they speak a language, but a totally different language than humans) and that their criteria for intelligence (adapted to their own environment and their own living conditions, and depending to the needs of cohesion and existence of their own societies) would be different from our humane criteria of intelligence. And given, that dolphins have existed on planet Earth for many thousands of years longer than humans and have managed to adapt to the changes and needs of their environment, and the fact that they live in large groups (societies) demonstrates that they are naturally intelligent creatures but they have a different type of intelligent than us the humans (and unfortunately the humans at least some of the humans, the most intelligent kinds, from the specie of dolphins, try to outwit them and to exploit them by deceiving them or forcing them to do what they want for their own bad purposes).

And then refer that, if someone go to the down the path of the evolutionary scale, would go down to dogs, cats (I want to note that, I have observe that they sometimes with their illegal, nazi criminal ways parasitizing from me, their echelon machines interfere and to the brains of dogs and cats and obviously torture and this creatures), rabbits, mice, and insects which are and the creatures with the lower level of intelligence (these have very little intelligence). And refers to his opinion that it is possible to rank intelligence using computers

that look for an algorithm, that allows someone to see where intelligence lies.

And refer to that they, the physicists will examine this model in outer space and he being wondering himself, are there signs of intelligent life in the galaxy? And if so, how advanced might they be? (Is impossible to exist advanced life in anyone kind of gene chain, without to exist the path down of the evolutionary scale of this gene chain which the path to the down as and in Earthy gene chain, as and in every extraterrestrial gene chain would contain millions of species), He in continue mention that they the physicists can categorize the alien civilizations at the basis of the energy who they produce and from the energy who they consumption and he refers four types of civilizations.

- The type one civilization the one that would be planetary, and he refers some of their characteristics.

- The type two civilization, and he refers some of their characteristics and compares the type two with the federation of planets in the television series "Star Trek", which according to his opinion, would be a type two civilization.

- Then the type three, characterized them as galactic civilization, and he refers some of their characteristics and compare the type three with some television series or movie, of "Empire Strikes Back" (I have not watch this movie or television series, I do not know of what of this two is) that they would be a type three civilization.

- And he questioned himself, what of energetically type civilization Earth are? He give the answer that the Earth are type zero civilization (not by me, and not we), they the illegal, nazi criminally insane, harmful parasitic, echelon machines basements are type zero (of any view they are zero) civilization, and he (Michio Kaku) refers some of the energetically characteristics of the energetically type of zero civilization. And he adds that Earth does not attain planetary energy at all, that would be type one civilization, and that the Earth energetically are stuck at type zero.

And he continues, be asking himself, what would it take to move between universes? What would it take to enter a "horizon of factor", a black hole? (there is a Theory formulated by Stephen Hawking that the space bodies "horizon of factors" (common be named as black holes) are gates which drive to other

dimensions and to other universes, but of course the "horizons of factors" have enormous gravitational forces, so enormous that they do not allow even the light to escape from their gravitational forces which crush anything that comes close to them), – What would it take to break the flight barrier? And he answers that, would have to reach the energy of type three civilization, that is called the Planck energy, the energy of the big bang, that is the energy of a "horizon or factor" (black hole), the greatest energy in the universe, that is the Planck energy.

And in the question how long before the Earthy's can attain the Planck energy, his answer is a modest calculation shows to be about maybe 100.000 years more advanced but the humans are now, in order to harness the Planck energy, so chances are that if one day the Earthy's met an intelligent (extraterrestrial) civilization, they would be maybe 100.000 years more advanced than the Earthy's.

– And continue that then, the next question is, how should we know of a type three or type two civilization, if we were to bump into one? and he answer that they (the physicists) have looked for type two, because type two civilization give off an energy "who" of a black body (obviously he refers in some space body) radiation emitting, that they the physicists can measure. And he refers that because their devices are so primitive they have not yet been able to conclusively show that they have exists, [He is so close in order the humanity (at least the lawful ones, from all humanity) to see him? Or does he look so humane to them that they cannot distinguish him? Obviously, I am human, the variation of "mighty human" and my name Dimitris Mantzanas. But I think that now the "liberation day" is close and the planet Earth will make leaps forward].

But if they can break the light barrier, if they can go faster than the speed of light, then it's possible they may have the energy of a Wormhole (one of the Albert Einsteins theories, according with which is needing great energy and gravitational force, in order to be created a space Wormhole, that is a way for journeys in space-time), and that at that point, they would be energetically type three civilization. They would have the energy, the Planck Energy, another "who" that his opinion is that they could create universes (my own opinion is that this is impossible for biological creatures, Earthy or Extraterrestrial, to create universes,

only the God can create universes and solar systems) or to move between universes (my own, and my own genus – my own tribe's envision for the future is limitless and timeless, so who knows after millennia maybe the Earthy's to can move and between universes).

To mention, and first of all to noting that I am not a consumer good and as me, and all my own genus – my own tribe are not consumer goods, but me was, and through me, and all my own genus – my own tribe were, created by all the power of the entire Earth's Mother Nature's gene chain, for the purposes of the protection of all the species of Mother Nature's creatures, so and for the protection of the entire planet Earth, of course and I am human being the variation of "mighty human", "who" cover all the planet Earth and extend and beyond the Earthy boundaries, and of course I was created by Mother Nature with the capability to emit my own "mighty human energy", "who" as I mentioned cover all the planet Earth, and extend and beyond the earthy boundaries, is "my own mighty human energy", the energy that a characteristic radiation that (a "who") about the a black body emit? as referred to energetically type two civilization? or is "my own mighty human energy" the type of Planck energy (another "who") that the "horizons of factors" emit? as referred about to the energetically type three civilization? I am not sure yet what of these two but sure (and in any case) "my own mighty human self" is a "who" an always mine and indivisible "who" that can to be extend to tens, hundreds, thousands and so on, an Earthy "who" that accompanied with the entire his provenance will voyages and will habitat and on other planets, a "who" that will expand in the universe [I was created by Mother Nature to possess the fundamental physical laws and all the resulting laws of physics and to possess powers that the most powerful space bodies, the "horizons of factors" have, and to can to defy the laws of physics (and I can to control the physical constants of a planet (as it refers and by the Michio Kaku, and perhaps and from other physicists, about the energetically type one civilization the planetary type), so and I can gradually and to restore the physical constants on planet Earth, and to control the physical constants of an unhabitat planet in other solar system in the so called habitation

zone, so that gradually to shaped the condition for habitation of Earthy life and my own Earthy "who" will voyages and expand in the universe accompanied from his entire provenance}, so, I can reasonably assume that the energy that the always mine the "my own mighty human self" created to emit, that the "mighty energy" that I am emitting is type of Planck energy "who" categorized energetically and to type three civilizations]. And the sure is that my own capability, me to emit my own "mighty energy", was given to me, and through me and to all my own genus – my own tribe, by the Mother Nature from her entire gene chain and with contribution of all her millions creature's species. And Mother Nature is in danger not only from extraterrestrial factors (and recognized, but and of many other asymmetric and pending threats arising from the universe), but and from Earthy reasons, for which earthy reasons in the bigger percentage are responsible the humans, the humankind. Since June of 1974 (month and year of my conception) was given by Mother Nature to us the humankind the capability, and the obligation, and the responsibility and to help the Mother Nature she and to be protected, and from the Earthy reasons {and sure this ability the defensive and protective force on behalf the planet Earth could have was reinforced from the 1990 (in my fifteen, I was in reproductive age, and I could from then, to have made children), and for to dealing with negative Earthy factors and simultaneously and for protection and from extraterrestrial factors (pending and asymmetric threats) and vice versa}. After the "liberation day" (must be a clear without any negotiation win for the legal ones), I will pursue many my own, of my own genus – my own tribe children, to be born (if it will be need, I will construct and the artificial womb in order to make children), and will be exist plenty of my own, and of my own children's from my own genus – my own tribe "mighty human energy" on the planet Earth {I will place my own mighty human powers (mighty energy, mighty perception, and mighty powers, are indivisible) and all my children, all my own genus-my own tribe (all the Earthy "who") under the auspice of UN, depend of when and from how many women I will find I can place under the auspice of UN, tens, hundreds, even and thousands "mighty humans"}, and for the protection of all the Mother Nature and I will propose under the auspices of UN (the UN there were and the 1975 and

from before the 1975) to be created an of UN Program (and I will support my proposed with documentation evidence) for energetically transition (for as many countries would want to participate) to totally and plenty clean energy that with lawful ways and for lawful purposes to being produced by "mighty human energy" {And sure I am human, and my mighty energy can have origin from space bodies (horizons of factors), but by the time emitting by me, is humane energy, as I am human being the variation of "mighty human", so I will make this my own proposal and for protection of all the Mother Nature and from reasons as are, the climate change, the Overheating of the Planet, the environmental pollution (the UN will have the powers to dealing the environmental pollution and in difficult approachable environments as are the Oceans), and for reasons of defense and protection from extraterrestrial factors, as are pending and asymmetric (recognized and unknown) threats that can arise from the limitless universe, as for example from possible to exist (if it is not sure yet that exists) at least one or more extraterrestrial "who". And personal for me, Dimitris Mantzanas and for reasons to can achieve and to can realization of my own, and of my own genus – my own tribe's, the envision for the future, which in order to become reality, and we the lawful Earthy's to have the lawful opportunity and the ability to communicate at least on equal terms (and onward and from position of power) with extraterrestrial civilizations, the planet Earth at least as many countries would want to can be supported energetically from humane energy from the always mine (but always Earthy) the "my own mighty human energy" the my own "who", the created by the Earthy Mother Nature's gene chain "who" that were from his creation in June 1974 always Earthy, and always remain Earthy and always are going to be only Earthy and always indivisibility.

[The beginning that and in my blog describe (...to add my post beginning from my blog....) is not the first of the restarts/beginnings that the Mother Nature made in her existence and in her gene chain evolutionary path. She faced at least (5) five periods of disastrous events during which the bigger percentage of her creatures (of her genes) extinct, but always she made her greatest efforts that she could and endured and faced with success these disastrous events and she made and

in some way of view new beginnings and she have moved forward created of what had remained in her availability and she continued to create she never stop to create and always she continue to create. The last disastrous event she faced was about 65 million years ago when she lost about the 70% of her species of creatures (of her genes), but she again endured and she made from what she had in her availability a new restart/beginning from which occurred as dominant wider kind (with many species) the mammals (we the humans are from the kind of mammals), so she have and deep memory and the power and endurance always to create from what have in her availability and to move forward. This time she created in order to prevent the disastrous and to protect all her species, she made her effort with from what she had in her availability (with her entire gene chain) before she face the disastrous event and she in June 1974 created the "mighty human" the Earthy "who" (maybe to be her living proof/ voice of her try to continue to live, to continue to exist, and to continue to create). We the humans at least and sure the lawful of us have not any right to ignore and in no one case have not any right to let to be lost what she created, we must see and face what she created (The Earthy "who") as restart and beginning, as chance we to ensuring the Mother Nature's existence and as beginning and for a more prosperous future, she with her creation of the Earthy "who" gave us the Earthy's at least to lawful of us the ability to open our horizons in the universe (as and the scientist had support the life on Earth began from the Seas and Oceans, so perhaps the bigger contributors to the creation of the Earthy "who" to be the Seas the Oceans -the waters]

I have in my mind about this that we can start converting "mighty human energy" to in plenty of electrical energy, and some time will find and the right lawful and safe technological ways (but sure never their illegal, nazi, criminal, and parasitizing, echelon machines, neither one small part from these machines) we the Earthy's through storage of mighty human energy (until sometime or until perhaps some time and to find way, lawful always way (Michio Kaku for example support or supported that the human kind would need 100.000 years, my opinion we will need much less years), to produce with some lawful technical way the

Plank energy) to be able to being transitioned to the "mighty human energy" energetically level of type three civilization with many of the characteristics that the Michio Kaku refers and describe as for example the voyages in space and time (I have already mentioned my opinion that would be always impossible for our biological humane existence (as and for any biological extraterrestrial existence), we to create universes, me and my own genus-my own tribe are "mighty humans" not Gods), but always in accordance with the achievements of our ancient cultures and in accordance with our religion beliefs (the our biological humane existence constants), and this is contained in my own, and in my own genus – my own tribe's, envision for the future, and is this of my own proposal and if will pass with success from the UN General Assembly, as I have already mentioned, I will pursue to find as many women in reproductive age it will be needed (and if I find not women, I will construct the artificial womb) to make many children, in order we the Earth (of course and I have planet and my own genus-my own tribe have planet (is not only mine and my own genus-my own tribe's planet) named planet Earth) to send to the universe signals of our advanced civilization, and we with being converting where this will be possible uninhabited planets to properly for Earthy life planets, the Earthy's in general to be expand and to be habitat and on other planets in other solar systems and figuratively speaking, we the Earthy's to be make our planet Earth (to sparkling in the universe), and not only from our energetically level, but and from our cultures, from our religious beliefs, from our humane ideals and values (from the constants of our humane existence), from what we the Earthy's must be.

And he continue his narration mentioning that, when physicists were asked about flying saucers and UAPs (Unidentified Aerial Phenomena), and Extraterrestrial civilizations, the bottom line is data, and that now they (the physicists) have data, that the u.s. navy has admitted that yes, there are hours of videotapes, that can be analyzed to calculate the characteristics of these things. They now become realize that these objects (The Unidentified Flight Objects), whatever they are, can travel up to Mach 20, and they can accelerate from Mach 5 to Mach 20 very, very rapidly. And they can even fly underwater, believe it or

not, underwater, in the air, into outer space, and they zig-zag. [I can through "my own mighty human energy" to move almost with the speed of light, and the Mother Nature created me, so that, all my human and my mighty human existence to finding in full balance, so and my thought can move with the same speed, in order me to can use and handle properly and effectively (and always for the right purposes) "my own mighty human energy" and the entire and always mine, the "my own mighty human existence", and after the "liberation day" I will make and children, and even if they, the obviously extraterrestrial creatures (and obviously with advanced intelligence creatures) who (are they "who"? or have only advanced technology? If they are "who", why they stay hide from us behind their flying machines?), who being find inside these Unidentified yet, but obviously extraterrestrial flying machines have copies parts of the fourth's nazi, criminal, parasitic (echelon this time) reich's formation their illegal, criminal, nazi criminal ways parasitizing from me, their echelon machines, so that, they can to be stay hidden from me, to note that, after nine months the human babies, so and the mighty human babies are born and then they will cannot continue stay hidden from me, and so they will cannot stay hidden nor from the UN. My own "mighty human energy" and the entire "my own mighty human existence" penetrate and the core of the planet Earth and reach to the other side (cover all the planet Earth) and that continue to move and beyond the Earthy boundaries and into the outer space, so they the extraterrestrials will cannot in no one case to stay hidden and Unidentified from me, and so they will cannot stay hidden nor from the UN].

And he continues by mentioning that when someone calculate the centrifugal force (the G-force) inside these Unidentified Flying Objects (obviously extraterrestrial flying machines) can realize that any living thing would be crushed, crushed by the zigzagging of these objects, whatever they are, we are talking about a new law of engineering beyond anything that we can muster here on the planet Earth, these things require technology beyond anything we the Earthy's have (The obviously extraterrestrial creatures (forms of life) who finds inside these obviously extraterrestrial flying machines, sure are biological

creatures who come from extraterrestrial gene chain, and as biological creatures, sure and in relevance with the centrifugal force (the G-force), they have limits by their biological existence, but they obviously can to survive inside these flying objects under this large centrifugal force (G-force). And about the abilities of these unidentified yet flight objects is drawn the conclusion that is about a new law of engineering beyond anything that the Earthy's can muster on the planet Earth, that these things requires technology beyond anything the Earthy's have. So about the extraterrestrial forms of life inside these extraterrestrial flying machines, we have to do with very evolved extraterrestrial biological creatures ? who have the capability to possess some kind of powerful powers that give them the ability and to cope with the centrifugal force (G-force)? or they have some kind of very advanced technology which protect them from the centrifugal force (G-force)? or both? About the same these obviously extraterrestrial flying machines that seems to be a new law of engineering (the creation of the universe began and based on the fundamental physical laws and as the creation forward on and new structures (as are the space bodies and space phenomena) adding in this limitless of space-time structure resulting and the laws of physics and the engineering laws for the construction of the new structures, and for the construction on the new structures), something that we the Earthy's have not yet so advanced technology.

About the new law of engineering with which these extraterrestrial flight machines seems to have been constructed and of that to be governing [the Universe was created according with the fundamental physical laws (in accordance with the Big Bang Theory the fundamental physical laws occurred simultaneously with the Big Bang explosion, God was not surprised, would be impossible for God to be surprised), was began (the universe) to being created (and the Universe continue to expand and to evolve, so the creation of the Universe has never stopped) according with the fundamental physical laws and as new parts of the total began to created, from the fundamental physical laws be resulting and the laws of physics and the laws of engineering in accordance with which constructed the creation of each new part of the universe, so from the time that this new law of engineering occurred inside the Universe, sure

occurred (is impossible something different) in accordance with the fundamental physical laws, and so sure and governing by them], to mention that from the time that "this new law of engineering" was found out inside the universe and so would be governing by the laws of universe, the fundamental Physical laws and all the resulting laws of physics (after "liberation day" we the legal ones will find out and this and perhaps and more new laws of engineering), and about the extraterrestrial forms of life (obviously biological creatures) who obviously are inside these extraterrestrial flying machines, from the time that they were created in the universe (obviously from an extraterrestrial gene chain) they as much evolved and to be were created (as and what other else created in the universe) according with the laws of universe, according with the fundamental physical laws and all the resulting laws of physics, and so they and would be governing from them.

About us the Earthy's, since June 1974 be given to us to Earthy's by our Earthy Mother Nature's gene chain, through me, and through me and through my own genus – my own tribe, the always indivisible and always Earthy "who" the "entire my own mighty human existence" the capability to have access to laws of universe, to possess the fundamental physical laws and all the resulting laws of physics and so and the laws of structure engineering and construction and for all the space-time infrastructure, as and the powers of the most powerful space bodies in the universe, the powers of the "horizons of factors" that have and the capability to defy the laws of physics and so and the laws of engineering. So we, the Earthy's the legal ones of all us, in general are very strong and very powerful and we have nothing to fear from contact and communication with anyone extraterrestrial form of life, we are stronger from them and we have a strong and deep cultural background, we can meet them on equal terms and from the position of power, nor we have to fear nothing from their flying machines. We have only to gain from communication and interaction with extraterrestrial civilizations, to gain in knowledge, to gain in advanced technology, to gain from through the UN a peaceful alliance where we, but and they the extraterrestrial forms of life will want through the UN to make with us the Earthy's, and sure we

will have to gain many from these kind of alliances which will give us and the opportunity, we the Earthy's to expand sooner our Earthy life and existence to the universe].

In continue he (Michio Kaku) refers that a percentage of 10% of these UFO sightings seems to defy the known laws of engineering, and that some of them have multiple sightings by multiple modes [and the fact that many of these UFO sightings seems to defy the known laws of engineering, that is something that we can to recognize only as very big and contingent annihilated threat for all the Mother Nature, because who can defy the structures of the construction as for example of a planet could represent an annihilation threat for this planet and for any planet and we cannot base our existence on hollywood movies about ET style extraterrestrial "who", we have our Earthy "who" to counter-array against them (we the humans are about eight billions, they? The most advanced from the extraterrestrials?) and we must to counter-array against them many of "mighty human" units a collectively and always indivisible "who", a large in collectively acting of many "mighty human" units defensive force, and the UN have the lawful forces and to destroy the their illegal, nazi, criminal, murderous, harmful parasitic echelon machines basements ("liberation day") and the lawful forces to make many units, to give me the opportunity to make many children - many units of "mighty human" (and thousands if that is necessary) of the collectively and always indivisible Earthy "who"] and as I have mentioned, of course I have planet the planet Earth. They the illegal, nazi, criminals. murderous, harmful parasitic echelon machines basements have not planet. [about the Unidentified Flying Objects, as I have already mention they sure will be governing from the fundamental laws of physics, and that I was created by Mother Nature and with the powers that the horizons of factors have and me to can to defy the laws of physics, so we have not nothing to fear from their flying machines, we have only to gain and from this advanced technology].

He reports that for years, efforts being made to conceal official reports on this subject, as a consequence, no data, very little data has been collected until recently, and he refers a such an incident, and he continue saying that, but now

the burden of proof has shifted, that the burden of proof (for the usa's) is on the military now to prove that these things are not extraterrestrials, that the data has to be analyzed to figure out what these objects are, what their flight characteristics are, and who is behind them (obviously inside them, they could not to handle them from a distant of another solar system), that now they have access to videotapes, and that now the burden of proof is to prove that these things are not extraterrestrial.

And he made a reference to some of the scrap papers that the fourth's nazi, illegal, criminal, parasitic (echelon this time) reich's formation, their illegal, nazi criminally insane, harmful parasitic echelon machines basements have wrote, mentioned one of these the FOIA act, the freedom of Information act. They first with their nazi, illegal, criminal, nazi criminal ways parasitizing from me, their echelon machines. hide the information's and being prevented me and the UN from be informed and after they write and some more scrap paper and they pretend the smarts and the good ones, they are not neither smarts nor the good ones, they since decades now (since 1974-1975) are enemies of entire planet Earth.

[I am not military person in no one army of no one country or organization, and I am not need to be or to become military person in no one country and no one army, and of no one military organization. I need what all the planet Earth needs the "liberation day" to come and to come soon, the sooner is possible, and after I will in person cooperate with scientists and the UN's Disarmament Affair Office and for that issue, we must to find out and if these Unidentified yet Flying Objects visiting Earth, if they visiting the Earth unarmed or armed with any form of weapons (the most possible to be armed with some kind of weapons, they doing long distance space voyages), and in this case they entering the area that will be controlled by the UN should to deactivate any of their weapons].
